

Research Scientist

The Center for Human Services Research, University at Albany is seeking a Researcher to conduct process and outcome evaluations of social service initiatives. Areas of focus include children's mental health, juvenile justice, child welfare, and substance abuse. Responsibilities include overseeing data collection; managing project timeline and deliverables; interacting with sponsors; using multivariate statistical techniques to analyze program impacts; and preparing manuscripts for publication in peer-reviewed journals.

Minimum Qualifications:

1. Master's Degree from college or university accredited by a USDOE recognized organization in social sciences or related areas
2. Three years research experience in program evaluation, prevention research, or social science research
3. Demonstrated experience in the use of multivariate statistical methods
4. Experience using statistical software packages such as STATA, SPSS or SAS
5. Demonstrated ability to work with a culturally diverse population
